

WE'RE HIRING!

prescribe**FIT**

Senior Full Stack Software Developer

(Columbus, OH) – Prescribe FIT LLC

Engaging with our clients' life story begins with their primary care physician.

Prescribe FIT has designed and implemented a unique solution that actively promotes the adaptation of a healthy lifestyle that embraces daily physical activity and healthy nutrition choices designed to lower health care costs. This is accomplished by opening new communication channels between primary care physicians, qualified specialists and facilities to track and analyze the lifestyle data of patients to better understand and influence behaviors.

ROLE DESCRIPTION

We're building a small, exceptionally talented development team to build out the technology platform for our high-growth early stage healthcare business. To get started, we're looking for an experienced full-stack developer that wants to wear a few hats - contribute to our product strategy and technology choices, help build our first product, and grow and mentor our team.

We're too small to need engineering managers, a CTO or VP of Engineering. But the right candidate might grow into one of these roles eventually, or you may prefer to have influence, but keep writing code - either is fine for us.

The ideal candidate can turn ideas into a great product with good technology choices and a high-quality codebase. The ideal person for this position should be ready to grow with a strongly backed company, capable of effective process/project management and ready to build and mentor a team of developers.

WHAT YOU'LL DO:

- Build and lead a team of developers through the development and implementation of our first piece of software.
- Design and develop web applications and APIs.
- Assist the team in solving tough customer and key partner issues.
- Help establish strong product management, software development, and DevOps practices including agile, testing, revision control, and path to production.

TECHNOLOGY

Over the first year, we're focused mostly on web development and will start doing native mobile apps next year. We're not yet strongly committed to a set of platform choices—that will be one of the things you help drive, but we do want to keep it open source with a strong developer community.

GENERAL RESPONSIBILITIES

- **Technical abilities:**
 - 4+ years full-stack web development experience
 - Expertise with one or more open source server-side languages and web-development frameworks like Ruby/Rails or Python/Django/etc.
 - Strong client-side skills including Javascript frameworks and a decent design sense
 - Ability to contribute to building product management, software development, and ops processes
 - Basic IaaS/PaaS skills to get our applications running in the cloud
- **Non-technical abilities include:**
 - Ability to create cohesive relationships and mentor junior developers
 - Great communication skills
- Consultative approach to solution-based problem-solving
- Ability to understand customer needs and challenges
- Supports an environment based on radical honesty and an approach to collaboration which supports open communication
- Strong desire to improve and uplift others on your team

EMPLOYMENT DETAILS

- Full-time
- Salary + Bonus (Starting: \$120,000-140,000 per year)
- Health, Dental and Vision Insurance Benefits
- Background check required
- Start Date: November 2018
- Office Location: Franklinton neighborhood, Columbus, Ohio
