

SQLSever/Python Developer

A technology team within a top tier investment bank is seeking a SQLServer Developer with strong Object Oriented Programming experience (Python, Java or C++) to join their team prior to the design and implementation of a brand new system.

The group itself sits within and supports capital markets technology. The systems being utilized would be used for trade capture, risk management, clearing and settlements among other capital markets related activities.

The SQLServer/Python developer will be largely responsible for the design and development of brand new systems that are part of a large, enterprise wide, relational database. Key skills required for this position include work with SQLServer, SSIS, ETL, stored procedures and relational databases. While this team primarily focuses with database work, you would also have responsibilities developing messaging and reporting systems using Python, so working with object oriented programming is expected.

Qualifications for this position include:

- 5+ years of SQLSever Experience
- 5+ years of experience with Python or other object oriented languages (C++ or Java)
- 2+ years experience working with SSIS, ETL and relational databases
- Desire and willingness to be challenged and learn about new technologies as domains
- Strong analytical and creative problem solving skills
