

Information Technology Department

At

Producers National Corporation

Position: Software Engineer

Type: Full-Time Salary

Job Description:

As a software engineer at our company, you will develop applications that users use to connect, interact, process, and analyze information. Our products require processing vast amounts of information and interaction with our core systems. We are looking for a person that has the skills, or is willing to learn the skills, required to bridge the gap between our current tool set and the set that is needed to create a more efficient and user-friendly experience for our employees, clients, and agencies. You will engage both technical skills and customer service skills to help resolve concerns of enterprise users, and contribute your innovative ideas in automating. As a software engineer, you will work with cross functional team members on projects that are critical to our companies needs. You will deal with many project opportunities in our fast-paced, growing, and evolving business. It is essential that our engineers be versatile and enthusiastic when tackling new problems. This position requires our engineers to provide programming solutions to challenging technical issues and optimize the Producers National group of companies experience.

Responsibilities:

- Design, code, and implement processes and infrastructure changes to scale policy and claims processing
- Propose and design web based server side apps to improve data flow processes
- Test new software functionality
- Troubleshoot product related issues, work with business teams to identify customer needs, as well as work with rest of IT team to improve the product
- Deliver technical solutions through automation, proper coding techniques, timely project completions, precise data analysis and dedication to providing outstanding user experience
- Work closely with enterprise users to understand underlying business challenges and explore innovative solutions to real-world problems
- Act as key technical support contact for certain technologies and information on products for particular states and lines of business

Minimum Qualifications:

- B.S. degree in Computer Science, related technical field or equivalent practical experience
- Knowledge of database concepts and stored procedures
- Coding skills in database driven web applications in Python (or Ruby, PHP, Java), JavaScript and JQuery
- Strong knowledge of UNIX/Linux
- Numbers oriented

Preferred Qualifications:

- BS or MS degree in Computer Science, related technical field or equivalent practical experience
- Experience in business software or app design
- Coding skills in writing stored procedures and querying relational and NoSQL databases
- Coding skills in database driven web applications in Python (or Ruby, PHP), JavaScript and JQuery or AngularJS/NodeJS
- Knowledge of UNIX/Linux servers, Apache, packages, API, Python modules and libraries
- Excellent implementation skills in either C++, Java, or Python
- Analytical/numbers oriented
- Background in economics or accounting

Benefits:

- Health and Dental Insurance
- 401K with Company Match
